

WHO'S HOT, WHO'S NOT

THE HOTTEST COMPANIES OF 2002

EPICOR SOFTWARE

Irvine, Calif.

www.epicor.com

From basic enterprise resource planning (ERP) functions to collaborative commerce, Epicor offers it all. Epicor was one of the early enterprise vendors to integrate its frontoffice, backoffice, and e-business systems to provide a holistic view of a manufacturer's operations.

Epicor's focus on the customer differentiates it from the competition. Most traditional ERP vendors focus mostly on improving the efficiency of business processes. Epicor's business performance solutions focus on improving customer satisfaction, retention, and referral, and prove its commitment to improving a company's top line, not just its bottomline.

Epicor's manufacturing solutions enable midmarket companies to extend and optimize their enterprises and more effectively collaborate with their customers, suppliers, and partners.

The company's four main product offerings: e by Epicor, Epicor eManufacturing, Clientel, and iSolutions, give the solutions that make-to-order and mixed mode, job shops, and those companies with complex manufacturing processes what they require.

Epicor's solutions are complemented by a full range of services, providing single point of accountability to promote rapid ROI and low total cost of ownership.

In addition, Epicor is committed to XML Web services by joining with other industry leaders in February in the launch of the Web services Interoperability Organization. It is a testament to its leadership in the market.
